<b>Ambient Air Quality Standard</b>	ls	
		_

		California Standards <sup>1</sup>		Federal Standards <sup>2</sup>			
Pollutant	Averaging Time	Concentration <sup>3</sup>	Method <sup>4</sup>	Primary 3,5	Secondary <sup>3,6</sup>	Method <sup>7</sup>	
Ozone (O <sub>3</sub> )	1 Hour	0.09 ppm (180 μg/m³)	Ultraviolet Photometry		_	Same as	Ultraviolet
	8 Hour	0.070 ppm (137 μg/m³)		0.08 ppm (157 μg/m³)	Primary Standard	Photometry	
Respirable Particulate Matter (PM10)	Particulate Matter	24 Hour	50 μg/m³	Gravimetric or _ Beta Attenuation	150 µg/m³	Same as	Inertial Separation and Gravimetric
		Annual Arithmetic Mean	20 μg/m³		_	Primary Standard	Analysis
Fine Particulate	24 Hour	No Separate St	ate Standard	35 μg/m³	Same as	Inertial Separation and Gravimetric	
Matter (PM2.5)	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	15 μg/m³	Primary Standard	Analysis	
Carbon Monoxide (CO)	8 Hour	9.0 ppm (10mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	9 ppm (10 mg/m³)	- None	Non-Dispersive Infrared Photometry (NDIR)	
	1 Hour	20 ppm (23 mg/m³)		35 ppm (40 mg/m³)			
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m <sup>3</sup> )			_	_	
Nitrogen Dioxide (NO <sub>2</sub> )	Annual Arithmetic Mean		Gas Phase Chemiluminescence	0.053 ppm (100 μg/m <sup>3</sup> )	Same as Primary Standard	Gas Phase Chemiluminescence	
	1 Hour	0.25 ppm (470 µg/m³)		_			
Sulfur Dioxide (SO <sub>2</sub> )	Annual Arithmetic Mean		Ultraviolet Fluorescence	0.030 ppm (80 µg/m³)	-	Spectrophotometry (Pararosaniline Method)	
	24 Hour	0.04 ppm (105 μg/m <sup>3</sup> )		0.14 ppm (365 μg/m³)	_		
	3 Hour	-			0.5 ppm (1300 µg/m³)		
	1 Hour	0.25 ppm (655 µg/m³)		_	_		
Lead <sup>8</sup>	30 Day Average	1.5 µg/m³		_		_	
	Calendar Quarter		Atomic Absorption	1.5 μg/m³	Same as Primary Standard	High Volume Sampler and Atomic Absorption	
Visibility Reducing Particles	8 Hour	Extinction coefficient of visibility of ten miles or miles or miles or miles or miles or miles or more for Lake particles when relative to percent. Method: Be Transmittance through	more (0.07 — 30 Fahoe) due to numidity is less than eta Attenuation and	No			
Sulfates	24 Hour	25 μg/m³	Ion Chromatography		Federal	•	
Hydrogen Sulfide	1 Hour	0.03 ppm (42 μg/m³)	Ultraviolet Fluorescence	]	Standards		
Vinyl Chloride <sup>8</sup>	24 Hour	0.01 ppm (26 μg/m³)	Gas Chromatography				

- 1. California standards for ozone, carbon monoxide (except Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, suspended particulate matter—PM10, PM2.5, and visibility reducing particles, are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
- 2. National standards (other than ozone, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest eight hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calender year with a 24-hour average concentration above 150 μg/m³ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact U.S. EPA for further clarification and current federal policies.
- 3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
- 4. Any equivalent procedure which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
- 5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
- 6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
- 7. Reference method as described by the EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the EPA.
- 8. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

California Air Resources Board (11/10/06)

Ambient Air Quality Standards (AAQS)

This page updated February 22, 2007.

SB 25 Standard Review Schedules

- **₩** Ozone
- Nitrogen Dioxide
- PM and Sulfates

Ambient air quality standards (AAQS) define clean air, and are established to protect even the most sensitive individuals in our communities. An air quality standard defines the maximum amount of a pollutant that can be present in outdoor air without harm to the public's health. Both the Air Resources Board (ARB) and the U.S. Environmental Protection Agency (U.S. EPA) are authorized to set ambient air quality standards (-- (Chart)).

## California Ambient Air Quality Standards

This site describes California ambient air quality standards and the current review of these standards mandated by the Children's Environmental Health Protection Act (CEHPA, Senate Bill 25, Escutia, 1999).

### Federal Standards and Other Resources

This site provides links to Federal activities related to Ambient Air Quality Standards.

## **Ozone Standard Review**

<u>Ozone</u>, a major component of smog, is a reactive gas capable of damaging the tissues of the lungs and respiratory tract. The ARB staff is currently reviewing the ozone standard for possible revision in 2004. <u>This site</u> provides a schedule for staff review of the current ozone standard.

#### Nitrogen Dioxide Standard Review

**Nitrogen Dioxide** is a reactive gas capable of damaging the cells lining the respiratory tract. The ARB staff is currently reviewing the NO2 standard for possible revision in 2005. This site provides a schedule for staff review of the current NO2 standard.

# Particulate Matter Standards Review

<u>Particulate Matter</u> (PM) consists of tiny particles that are easily inhaled deep into the lungs and may cause a variety of harmful health effects. In an evaluation of current California air quality standards mandated by the Children's Environmental Health Protection Act, PM standards were identified as a top priority for review. ARB staff reviewed the scientific literature and recommended revisions to the PM standards based on that review. On June 20, 2002, the Board adopted staff's recommendations and the revised standards became effective on July 5, 2003. This site provides information regarding the PM standards review.

### **Air Quality Monitoring**

The Air Quality Monitoring Program collects accurate real-time measurements of ambient level pollutants at over 40 sites located throughout the state.

## **Area Designation Maps**

Each year, the ARB reviews air quality data to determine if different geographical areas of California meet current State and Federal air quality standards.
